

CODE LAYOUT, READABILITY AND REUSABILITY

This page is used to configure how declarations, selectors, and so on are laid out. Options in this page are applied when ReSharper reformats existing code or when you type new code. You can adjust the values and check the preview pane at the bottom of the page to see how your preferences affect the code. Readable code is code that clearly communicates its intent to the reader. While it's easier said than done and often a challenge for inexperienced developers, creating readable code is as important as solving any software problem this is why it's often one of the first techniques a developer learns on the job. Readability and reusability are important characteristics of meaningful code considering the immense amount of code being produced every day. Coding meaningful and clean code is not a no-brainer. However, following simple rules and coding tips can significantly improve your code quality
