

REQUIREMENT ANALYSIS(FUNCTIONAL, OPERATIONAL, TECHNICAL)/FLOW CHARTS

Functional specs are based on the business requirements and contain the details of end user expectations of the product functionality. Software will be developed based on the functional specs. Technical specs contain the details of the how this is/can be achieved and the final product functionality details. Operational requirements explain what human action is needed to keep the product operational. Context Diagram shows the system boundaries, external and internal entities that interact with the system, and the relevant data flows between these external and internal entities.
