

## **TECHNICAL ARCHITECTURE**

Technical Architecture (TA) is a form of IT architecture that is used to design computer systems. It involves the development of a technical blueprint with regard to the arrangement, interaction, and interdependence of all elements so that system-relevant requirements are met. A technical architecture diagram provides an overview of the various components of your system and how they work together. They are beneficial when planning and managing large-scale technology projects, as they facilitate better decision-making and understanding
